Editor's Preface xi

Introduction 1

PART ONE

HARMONIC PURITY: FEELING THE NUMBERS

1. Seeing Air and Touching Sound 12

Definition of harmony • Periodicity • Review of overtone series

2. Singing Unison with a Drone 16

Entrainment • Unison as the ratio 1:1 • Singing sa

3. Singing Octaves 19

2:1 • Harmonic vs. melodic names

4. Singing Perfect Fifths 21

Third partial • Octave juggling • Rhythmic vs. harmonic 3:2 • Reading vs. singing • Solfege and sangam • Singing pa

5. Singing Major Thirds 27

Pentamorous nature • Fifth partial • Singing ga • Concurrent study of just intonation and equal temperament • Octave reduction of fifth partial • Rhythmic vs. harmonic 5:4 • Three-and-five problem

6. A Map of Harmonic Relationships 33

Low primes and their compounds • Singing re • Harmonic map • Major seventh and its harmonic path • Augmented fourth • Six-tone overtone scale • Melody as condensation of harmony

7. **The Perfect Fifth Below: Hello, Mother** 42
 Reciprocal tones • Dominant and subdominant compared • Singing *ma*
8. **The Major Third Below** 47
 Singing *komal dha* • Map of affects • Minor sixth in a seven-tone scale
9. **The Central Section of the Map Completed** 52
 Major sixth, 5:3 • Minor third, 6:5 • Minor seventh, 9:5 • Minor second, 16:15 • Completed central map
10. **The Five-Limit Lattice of Twelve Notes** 62
 The map from memory • Terminology • Harmonic paths • Tribute to A. Ellis
11. **Available Modes: Lydian through Phrygian** 68
 "Church modes" on C, with lattices and practices • Chromatic forms of five degrees • Intervallic content • Sun/moon spectrum • Major and minor as directionality of the thirds
12. **Mixed Modes** 78
 Tetrachord names • Modes with four consecutive whole steps • Modes with five consecutive whole steps • Modes containing augmented seconds • 32 available modes
13. **Internalizing the Lattice** 89
 Importance of learning to sing in tune • Singing practice • Melody vs. harmony • Between the notes • Lattice as a map of the psyche • Practice habits
14. **Numbers and Mysteries** 95
 Ratios for tones in relation to the tonic and to each other • Why seven tones in a scale? • When does "degree" evaporate? • Comparison of terms
15. **Chromatic Pairs** 102
 Diatonic vs. chromatic half steps • Major/minor thirds, sevenths, sixths • Perfect/augmented fourths • Major/minor seconds • Using all twelve tones
16. **Beyond Twelve Notes: The Extended Five-Limit Lattice** 112
 Cents and ratios compared • Pythagorean major sixth • Stepsiblings • Extended central spine of fifths • Extended *ga* spine of fifths • Contrasting uses of 10:9 and 9:8 • *Ga-ga* spine of fifths • *Ga-ga-below* spine of fifths • Extended five-limit lattice
17. **The Seventh Partial and Beyond** 124
 Prime universes • Septimal minor seventh, minor third, and fourth • Blues uses • Primes beyond seven

18. The Practice of Pure Harmony 129

Mode du jour, metric structures, other methods • Tuned keyboards

PART TWO

THE SELECTIVE USE OF EQUAL TEMPERAMENT

19. Leaping from Paradise 134

Historical reasons for the rise of temperaments • Emergence of equal temperament • Approximation vs. the real thing • Inner/internalized norms • Low-prime harmony as norms • Hunger for the center

20. Six Unambiguous Chords 143

Overtone chord and the major triad in equal temperament • Map of major triads • Ping-pong cadence • “Whole” cadence • Three-chord music • Map of the minor triad • Parallel major/minor pairs of triads • Cadences in minor • Mixed-mode cadences • Harmonic rhythm

21. Twelve Unambiguous Chords 155

Relative minor triad • Parallel minor vs. relative minor • Twelve triads in the lattice of twelve notes • Matchstick harmony • Adding a melody • Why study no-comma music? • Examples and exercises

22. Unambiguous Triadic Harmony in the Extended Lattice 164

Extended lattice of notes and triads • Extended chord lattice • Harmonic journeys • Harmonic balance • Melodies with passing tones

23. Dronality in Equal Temperament: Lydian through Phrygian 175

Overtone chord vs. chord of fifths • Didymic stepsiblings • Full lattice, equal-tempered triadic harmonies, and non-triadic possibilities for each mode • Positive confusion • Improvisation and composition

24. Dronality in Equal Temperament: Mixed Modes 199

Gaps in stacks • Modes with four consecutive whole steps compared • Modes with five consecutive whole steps • Is ambiguity good or bad? • Modes containing augmented seconds • Other modes

25. Chromatic Pairs and the Magic Mode 207

Major/minor sevenths combined • Major/minor thirds combined • Major/minor sixths • Perfect/augmented fourths • Major/minor seconds • Two or more simultaneous chromatic pairs • Five simultaneous chromatic pairs: the Magic Mode • Magic Mode commas • Magic Mode piece

26. Pushing the Magic Mode Envelope 222

Testing the rules • Augmented tonic 25:24 • Six-degree scale with a chromatic pair at the tonic • Ode to the Great Diesis • Quasi-modulation • Purya • G^\sharp/A^\flat Diesis • D^\sharp/E^\flat Diesis • Map of six Diesis modes • Todi • Super-Lydian C^\sharp , 135:128 • Sub-Phrygian G^\flat , 64:45 • Seventh partial tones in equal temperament • Lattice of entire Magic Mode • Magic scale • Magic Mode pieces

PART THREE

**THE FUNCTIONAL COMMAS OF EQUAL-TEMPERED
TONAL HARMONY**

27. Comma Phenomena 246

Comma defined • Pythagorean Comma (prime 3 is not prime 2): ratio notations, cents, equal-tempered fifths, non-functionality • Didymic Comma (prime 3 is not prime 5) • Great Diesis (prime 5 is not prime 2) • Diaschisma (3x5 is not prime 2) • Four commas compared • Modulation in pentatonicism • Modulation in general

28. Didymic Pairs of Tones 256

Singing the comma of the major sixth • Melodic vs. harmonic characteristics of the comma and its harmonic reversal • Didymic comma in dronality • Playing the comma of the major sixth in equal temperament • Singing the commas of the major second and the minor seventh in just intonation and playing them in equal temperament • Symmetry between the stepsiblings of D and B $^\flat$

29. Didymic Pairs of Triads 268

Staff vs. compass orientation of the lattice • Comma of the ii triad in equal temperament • Pathfinder vs. Homebody: the Didymic journey, the desire for home, the zap of the comma • Each comma works in both directions • Comma of the bVII triad, the II triad, the bVII triad • Fifteen pairs of Didymic triads in four families • Table of Didymic harmony • Uses of the Didymic table • The table as a map

30. The Great Diesis: The Beauty of the Beast 286

Pentamorous nature • A^\flat and G^\sharp compared in just intonation and equal temperament • Singing the A^\flat/G^\sharp diesis in just intonation and playing it in equal temperament • G^\sharp/A^\flat diesis • Reversing the polarity: rising and falling harmony • Examples • Another ode

31. The Tonal Array of the Great Diesis 299

Overtone Diesis Family: singing and playing the diesis of D^\flat/C^\sharp , E^\flat/D^\sharp , and B^\flat/A^\sharp • Reciprocal Diesis Family: playing diesis of A/B^\flat , E/F^\flat , B/C^\flat , and F^\flat/G^\flat •

Lattice of Great Diesis in C • Triadic diesis harmony: augmented, diminished and dominant seventh chords • Chart of the chords • Relative and parallel relationships • Further uses of the lattice

32. The Diaschisma 317

Comparison with the Great Diesis • Singing the D^b/C^\sharp diaschisma • Modal and modulatory types • Dominant seventh chord tunings • Augmented sixth chords • The Diaschisma as expression of functional ambiguity between dominant seventh chords and augmented sixth chords • Ga-Balanced Family: F^\sharp/G^b and C^\sharp/D^b (both modulatory and modal types), A^b/G^\sharp , and B/C^b , family portrait • Ga-Ga Family: F/E^\sharp , B^b/A^\sharp , and E^b/D^\sharp , family portrait • Full array of Diaschismic pairs in C • Power of the diaschisma

33. Quasi-Functional and Nonfunctional Commas 336

Blues functions of the septimal comma • Septimal seventh/dominant seventh 64:63 • *Blu* and 5-limit harmony • *Blu*/minor 36:35, with tonic and subdominant types • *Blu*/*ga-ga* 225:224 • Pythagorean and other non-functional commas • Infinite replication of commas and the limits of sensibility

34. The Shape of Tonality 342

Distinguishing prime 3 from prime 5 • Just world is flat and tonal gravity reigns • Proportional lattice • Temperament raises and folds the plane • Each comma has its characteristic folding • View from the center • Picture of three commas • Position and expressivity • The dark side • Two kinds of tonic ambiguity • Virtual Return • Ambiguity as a dramatic force • Time line

PART FOUR HARMONIC PRACTICE, ANALYSIS, AND REVIEW OF THE THEORY

35. Practical Matters 352

Optimal tuning • Positional analysis • Grabbers • Harmonic vs. melodic, tonal vs. chromatic, spelling and misspelling • Key and mode • Tonic, root, and bass • Triads as special collections • Tunings of diminished triads • When not to analyze

36. A Small Syllabus of Diatonic Sequences 361

Function of harmonic models • Sequences whose roots ascend by thirds and by fifths, descending and ascending • Fifths descending with inversions and sevenths • Names and qualities of seventh chords • Descending fifths in other modes • Root motion by seconds • Summary of root motion and voice leading • Additional sequences • Practicing in keys

37. Cadential Practices: Parallel Borrowing	380
Scales against cadential chords: on roots, in keys • Borrowing from Minor, Phrygian, and Major • "Altered scale" • Additions to the dominant seventh chord	
38. The Long Cadence: A Comprehensive View of Cadential Energy	388
General characteristics • Long Cadence chord by chord • Combinations • Most common cadences • Phrygian, Plagal, Locrian, Double leading-tone, Deceptive, and Half cadences • Commas in cadences • Overtone/reciprocal balance • Standing dissonances • Tonicization vs. modulation • Cadence where the tonic is a comma • Practice suggestions and models	
39. Tonicization and Modulation	406
Pivot tones, pivot chords, and their distributions over time • Secondary dominants and their family of keys • Borrowing from minor • Extended family of keys • Deception: G^7 to 30 different resolutions with their lattices • When the pivot is a comma • Great Diesis practices	
40. Modal Modulation	428
Composing from a chain of keys/modes ("key chains") • Constructing key chains • Hints for composition • Three functional commas compared • Modulating Magic Mode	
41. A Syllabus of Cyclic Sequences	444
Virtual return • 53 sequences organized by the ratios between tonal centers, and by compass direction • 3:2 west and east • 5:4 south and north • 16:15 NE and SW • 10:9 SE and NW • Ambiguity of minor thirds • Quadrisections of the octave • 32:27 E and W • 6:5 NW and SE • Graphic summary • Comparative table	
42. Symmetrical Harmony and the Dissolution of Tonality	475
Tonal vs. symmetrical properties of chromatic, whole tone, diminished, and augmented scales, and the relation between their tonalities and symmetries • Other equal temperaments • Quarter tones • Atonality	
43. The Notation of Positional Analysis	492
Lattices based respectively on tones, chords, and keys, and their time-related notations • Examples from raga, Solage, Magic mode, Bartok, Faure, Mozart, Beethoven, and Kern • Harmony and form	
44. Review of the Theory	508
Summary of the theory, its value, flaws and limits • Whose theory is it?	

Afterword	513
Limits of twelve-tone equal temperament, just intonation, and their delimiting •	
Why is just intonation not taught? • Future music and the collective ear •	
Brain harmony • Music as a model of knowing • What music stands for	
Glossary of Terms	522
Glossary of Singable Tones in Just Intonation	530
