<i>Chapter 1. Introduction and overview</i>	1
K. Janssens and R. Van Grieken	
1.1 Introduction	1
1.2 Overview of the analytical reference section	5
1.3 Overview of the case studies section	7
References	10

PART I. ANALYTICAL REFERENCE SECTION

<i>Chapter 2. UV-, IR- and X-ray imaging</i>	15
Franz Mairinger	
2.1 Scientific investigations of works of arts and crafts	15
2.2 Application of electromagnetic radiation for the examination of cultural heritage objects	16
2.3 Instrumental basis	16
2.3.1 Light and radiation sources	17
2.3.2 Imaging	25
2.3.3 Sensor systems	33
2.3.4 Sensor subsystems	41
2.4 Surface examinations	44
2.4.1 Surface examinations with ultraviolet radiation	45
2.4.2 Instrumental techniques for UV-fluorescence photography	46
2.4.3 Instrumental techniques for reflected UV photography	46
2.4.4 Application of UV-fluorescence photography	47
2.4.5 Application of UV photography	48
2.5 Depth examinations	49
2.5.1 Depth examinations with infrared radiation	50
2.5.2 Depth examinations with X-rays and gamma-rays	54
References	66

Contents

Chapter 3. Electron microscopy and its role in cultural

<i>heritage studies</i>	73
A. Adriaens and M.G. Dowsett	
3.1 Introduction	73
3.1.1 Why use electron microscopy?	73
3.1.2 Imaging with electrons	73
3.1.3 Varieties of electron microscopy	75
3.1.4 Recent developments in commercial SEM	77
3.2 The interaction of electrons with	
a solid—contrast mechanisms	79
3.2.1 Scattering	80
3.2.2 Secondary electron emission	81
3.2.3 Backscattered electrons	82
3.2.4 Cathodoluminescence	83
3.2.5 Core-level excitation and X-ray or	
Auger emission	84
3.2.6 Electron energy loss spectroscopy	86
3.2.7 Diffraction in TEM	88
3.2.8 Image contrast in TEM	91
3.3 Components and optics of electron	
microscopes	92
3.3.1 Basic optics	92
3.3.2 The electron gun	92
3.3.3 Focusing an electron beam	93
3.3.4 Newtonian lens model	95
3.3.5 The magnetic prism	97
3.3.6 Detectors	98
3.4 Sample preparation techniques	102
3.5 Origin/provenance studies	104
3.5.1 Ceramics	104
3.5.2 Glass	105
3.6 Technology and techniques of manufacture	106
3.6.1 Seals	106
3.6.2 Ceramics	107
3.6.3 Glass	113
3.6.4 Metals	114
3.7 Use	117
3.8 Degradation processes, corrosion and	
weathering	118
3.8.1 Metals	119

Contents

3.8.2	Glass	119
3.8.3	Ceramics	120
3.9	Authenticity and authentication	121
3.10	Conclusions	123
	Acknowledgements	124
	References	124
<i>Chapter 4. X-ray based methods of analysis</i>		129
K. Janssens		
4.1	Introduction	129
4.2	Basic principles	131
4.2.1	X-ray wavelength and energy scales	131
4.2.2	Interaction of X-rays with matter	131
4.2.3	The photoelectric effect; X-ray fluorescence	133
4.2.4	Scattering and diffraction	137
4.2.5	X-ray absorption fine structure and spectroscopy	143
4.3	Instrumentation for X-ray investigations	147
4.3.1	X-ray sources	148
4.3.2	X-ray detectors	155
4.3.3	X-ray fluorescence instrumentation	164
4.3.4	XRD instrumentation	186
4.3.5	XAS instrumentation at SR beamlines	193
4.4	A survey of applications of X-ray methods in the cultural heritage sector	194
4.4.1	Compositional analysis of historic glass	195
4.4.2	Pigments	195
4.4.3	Lustre ware	200
4.4.4	Metallic artefacts	202
4.4.5	Analysis of graphic documents	206
4.4.6	Mn oxidation in odontolites	210
4.4.7	Therapeutic and cosmetical chemicals of Ancient Egypt	211
4.5	Conclusion	215
	Acknowledgements	216
A4.1	Figures-of-merit for XRF spectrometers	217
A4.1.1	Analytical sensitivity	217
A4.1.2	Detection and determination limits	217
	References	219

Contents

<i>Chapter 5. Ion beam microanalysis</i>	227
T. Calligaro, J.-C. Dran and J. Salomon	
5.1 Historical background and motivation	227
5.2 Fundamentals of ion beam analysis	228
5.2.1 Interaction of radiations with matter	230
5.2.2 Particle-induced X-ray emission	237
5.2.3 Elastic scattering of particles	244
5.2.4 Nuclear reaction analysis	246
5.3 Specific arrangements for the study of art and archaeological objects	251
5.3.1 External beams	251
5.3.2 Nuclear microprobes	253
5.3.3 Micro and macro-imaging	255
5.3.4 Portable systems	255
5.4 Applications in the field of art and archaeology	257
5.4.1 Materials' identification	257
5.4.2 Provenance of the materials	263
5.4.3 Alteration phenomena	266
5.4.4 Authentication and relative dating	267
5.5 Survey of worldwide IBA activity in the field of cultural heritage	268
5.6 Conclusion and future prospects	268
References	271
 <i>Chapter 6. X-ray photoelectron and Auger electron spectroscopy</i>	 277
Annick Hubin and Herman Terryn	
6.1 Introduction	277
6.2 The basic concepts of XPS and AES	279
6.2.1 Principle of X-ray photoelectron spectroscopy	279
6.2.2 Principle of Auger electron spectroscopy	282
6.3 XPS and AES instruments	286
6.3.1 General set-up	286
6.3.2 The vacuum system	287
6.3.3 The X-ray source for XPS	289
6.3.4 The electron gun for AES	290
6.3.5 Detection of electron energy	291
6.3.6 The ion gun	294
6.3.7 The sample holder and stage	295
6.4 Sample requirements	296

Contents

6.5	Information in XPS and AES spectra	297
6.5.1	Surface analysis	297
6.5.2	Qualitative analysis	297
6.5.3	Quantitative analysis	298
6.5.4	Chemical analysis	301
6.5.5	In-depth analysis	303
6.5.6	Data analysis	306
6.5.7	Imaging	306
6.6	Comparison of XPS, AES and other surface analytical techniques	308
6.7	XPS and AES for chemical analysis of cultural heritage materials	308
	Acknowledgements	311
	References	311

Chapter 7. Laser ablation inductively coupled plasma mass

	spectrometry	313
	Teresa E. Jeffries	
7.1	Introduction	313
7.2	The inductively coupled plasma mass spectrometer	314
7.2.1	Historical account	314
7.2.2	Operational rationale	315
7.2.3	The inductively coupled plasma	317
7.2.4	The plasma sampling interface	321
7.2.5	Ion focusing	323
7.2.6	Quadrupole mass analyser	323
7.2.7	The vacuum system	327
7.2.8	Ion detection and signal handling	329
7.3	Laser ablation: essential components	329
7.3.1	Development of the laser	329
7.3.2	The association of lasers with ICP-MS	331
7.3.3	Stimulated emission	333
7.3.4	Nd:YAG laser (resonator) cavity	334
7.3.5	Harmonic generation	337
7.3.6	Harmonic separation	338
7.3.7	Energy attenuation and control.	340
7.3.8	Beam delivery and viewing optics	341
7.3.9	Ablation cell and sample transport	342
7.4	Analytical concepts and factors affecting analysis	343
7.4.1	Why use the technique?	343

Contents

7.4.2	Sample preparation and mounting	344
7.4.3	Analysis of transient signals	345
7.4.4	Factors affecting analysis	347
7.4.5	Optimization and calibration	350
7.4.6	Figures of merit and analytical performance targets	352
7.5	Continuing developments and final remarks	355
7.5.1	Continuing developments	355
7.5.2	Final remarks	356
References		357

Chapter 8. Infrared, Raman microscopy and fibre-optic

<i>Raman spectroscopy (FORS)</i>	359
Howell G.M. Edwards and Dalva L.A. de Faria	
8.1 Introduction	359
8.2 Comparison of the potential use of IR and Raman spectroscopies for the non-destructive analysis of art works	360
8.3 Some theoretical aspects of IR and Raman spectroscopies	367
8.4 Instrumentation	373
8.5 Sampling	381
8.6 Resonance Raman	387
8.7 SERS	390
8.8 Intensity measurements in Raman scattering	390
8.9 Raman spectroscopy with fibre optics	392
8.9.1 Sampling considerations	392
8.9.2 Probe design	392
8.9.3 Probe background	393
References	393

Chapter 9. Secondary ion mass spectrometry. Application to archaeology and art objects

Evelyne Darque-Ceretti and Marc Aucouturier		397
9.1	Introduction	397
9.2	Principles and equipment	399
9.2.1	Principles	399
9.2.2	Equipment and choice of analytical parameters	410
9.3	Analysis procedures	420
9.3.1	Elemental identification, sensitivity	420

Contents

9.3.2	Quantitative analysis	425
9.3.3	In-depth analysis and depth resolution	429
9.3.4	Surface analysis	435
9.3.5	Imaging, lateral resolution	438
9.3.6	Chemical compound analysis and distribution	439
9.4	Examples of applications for cultural heritage	440
9.4.1	Dating and/or provenance studies based on isotopic analysis	440
9.4.2	Dating (not based on isotopic analysis)	444
9.4.3	Provenance studies not based on isotopic analysis	447
9.4.4	Surface layer analysis on artefacts	448
9.4.5	Interface studies on coated layers	453
9.4.6	ToF-SIMS applications	455
9.5	Conclusion	458
	References	459

PART II. CASE STUDIES SECTION

Chapter 10. The non-destructive investigation of copper

<i>alloy patinas</i>	465
David A. Scott	
10.1 A brief historical account	465
10.2 Optical examination	467
10.3 Environmental scanning electron microscopy	470
10.4 X-ray fluorescence analysis	474
10.5 Scanning X-ray fluorescence microanalysis	477
10.6 XRD analysis	480
10.7 FTIR spectroscopy	485
10.8 Conclusions	488
Acknowledgements	490
References	490

Chapter 11. Precious metals artefacts 493

G. Demortier	
11.1 Introduction	493
11.2 Non-destructive analysis of gold jewellery items	493
11.2.1 Contribution of atomic and nuclear (but non-radioactive) methods to the analysis of ancient gold jewellery items	493

Contents

11.2.2	Illustration of the analytical performances of non-vacuum PIXE for gold artefacts	496
11.3	The soldering of gold	498
11.3.1	Ancient recipes for gold soldering	498
11.3.2	Iranian goldsmithery from the 4th century BC	499
11.3.3	Tartesian gold artefacts	502
11.3.4	Later Iranian goldsmithery	506
11.3.5	Preparations of low-melting brazing alloys	509
11.3.6	A new reading of Elder Pliny's Natural History	517
11.3.7	Italian jewellery	520
11.3.8	Gold artefacts from Slovenia	521
11.3.9	The Guarrazar treasure	525
11.3.10	Merovingian and late Byzantine jewellery	528
11.4	Pre-Hispanic gold artefacts of Mesoamerica	530
11.4.1	Archaeological context	530
11.4.2	A selection of typical artefacts	534
11.4.3	Differential PIXE	536
11.4.4	Application to the measurement of the gold enhancement at the surface of tumbaga	538
11.5	Characterization of complex items	544
11.5.1	XRF induced by a γ -ray source	544
11.5.2	Gamma-ray transmission measurements	544
11.5.3	Study of a composite gold jewellery artefact	545
11.6	Gold coins	548
11.6.1	Fineness measurements of gold coins	548
11.6.2	Gold coins from the ancient world	548
11.6.3	Gold coins from the new world	556
11.7	Conclusions	558
	Acknowledgements	559
	References	560

Chapter 12. Diagnostic methodology for the examination of Byzantine frescoes and icons. Non-destructive investigation

	and pigment identification	565
	Sister Daniilia, Sophia Sotiropoulou, Dimitrios Bikiaris, Christos Salpistis, Georgios Karagiannis and Yannis Chrysoulakis	
12.1	Introduction	565
12.2	The Entry of the Mother of God into the Temple	566
12.2.1	Description	566

Contents

12.2.2	The preparation of the plaster: materials and technique	567
12.2.3	The drawing	568
12.2.4	Materials and painting techniques	570
12.2.5	Study of the colour palette	581
12.2.6	Conclusions	584
12.3	Mother of God Hodegetria	585
12.3.1	Description	585
12.3.2	Construction and state of preservation of the support	587
12.3.3	State of preservation of the surface	588
12.3.4	The ground	592
12.3.5	The drawing	592
12.3.6	Materials and technique of the painting	593
12.3.7	Conclusions	601
A12.1	Experimental details	602
A12.1.1	Non-destructive analysis	602
A12.1.2	Micro-sampling analysis	603
References		604

Chapter 13. The provenance of medieval silver coins: analysis with EDXRF, SEM/EDX and PIXE 605

Robert Linke, Manfred Schreiner, Guy Demortier,
Michael Alram and Heinz Winter

13.1	Introduction	605
13.2	The Friesacher Pfennig	606
13.2.1	Introduction	606
13.2.2	Experimental	608
13.2.3	Results	613
13.3	The Tiroler Kreuzer	622
13.3.1	Introduction	622
13.3.2	Experimental	624
13.4	Conclusion	629
Acknowledgements		630
References		630

Chapter 14. Pigment identification in illuminated manuscripts 635

Peter Vandenabeele and Luc Moens

14.1	Introduction	635
------	------------------------	-----

Contents

14.2	Combined method approach	636
14.2.1	Analysis of manuscripts	639
14.2.2	Sources of impurities	652
14.3	Analysis of the manuscripts from the collection of Raphael De Mercatellis	654
14.3.1	Introduction	654
14.3.2	Pigment identification with TXRF and MRS	655
14.3.3	Intra-manuscript comparison of <i>Expositio problematum Aristotelis</i>	657
14.3.4	Analysis of <i>Decretum Gratiani</i>	658
14.4	Conclusion	659
	Acknowledgements	660
	References	660
 <i>Chapter 15. Provenance analysis of glass artefacts</i>		663
	Bernard Gratuze and Koen Janssens	
15.1	Introduction	663
15.2	Obsidian, a natural glass used since the Paleolithic era	665
15.3	Bronze and Iron age glasses	670
15.3.1	Neolithic first artificial glassy materials and the discovery of glass during Bronze Age	670
15.3.2	When trade beads reached Europe	671
15.3.3	Middle Bronze Age plant ash soda-lime glasses	672
15.3.4	Late Bronze Age mixed soda-potash glasses	674
15.3.5	Iron Age and Antiquity natron soda-lime glasses	675
15.3.6	Protohistoric glass trade routes	678
15.3.7	Glass chrono-typo-chemical models: a dating tool?	678
15.4	Glass trade towards and from Central Asia and the Indian world during Antiquity	680
15.5	Carolingian glass production: some unusual lead glass composition smoothers	687
15.6	Late Middle Age recycled glass	691
15.7	Glass technology transfer during the 16th–17th century to and from Antwerp	699
15.8	Trade beads: the glass trade internationalization, during the Post-Medieval period	702
15.9	Conclusions	705
	Acknowledgements	706
	References	707

<i>Chapter 16. Corrosion of historic glass and enamels</i>	713
Manfred Schreiner	
16.1 Introduction	713
16.2 The weathering of medieval stained glass	716
16.2.1 SEM investigations of the corrosion phenomena on naturally weathered medieval glass	719
16.2.2 The determination of hydrogen in the leached surface layer by SIMS and NRA	725
16.2.3 Leaching studies of glass with medieval composition	731
16.2.4 IRRAS investigations on leached glass with medieval composition	735
16.2.5 Weathering phenomena on glass with medieval composition studied with TM-AFM	738
16.3 The degradation of medieval enamels	742
16.3.1 SEM investigations of the enamel of the medieval goblets	745
16.4 Conclusion	750
Acknowledgements	752
References	753
 <i>Chapter 17. A study of ancient manuscripts exposed to iron-gall ink corrosion</i>	 755
Ewa Bulska and Barbara Wagner	
17.1 Introduction	755
17.1.1 Iron-gall ink	756
17.1.2 Iron-gall ink corrosion	758
17.1.3 Investigated artefacts	760
17.2 Analytical methods	763
17.2.1 Inspection by scanning electron microscopy	766
17.2.2 Compositional analysis by X-ray fluorescence spectrometry	766
17.2.3 Electron probe micro-analysis	768
17.2.4 Laser ablation inductively coupled plasma mass spectrometry	770
17.2.5 Elemental analysis by inductively coupled plasma mass spectrometry	773
17.2.6 Graphite furnace atomic absorption spectrometry	774
17.2.7 Mössbauer spectrometry	775

Contents

17.2.8	Investigation of Fe(II)/Fe(III) by X-ray absorption near edge spectroscopy	778
17.3	Searching for the conservation treatment	780
17.3.1	Reconstitution of manuscript by model samples	780
17.3.2	Requirement for conservation treatment	782
17.3.3	Investigation of the model samples	784
17.4	Concluding comments	784
	Acknowledgements	785
	References	785
	Index	789
