Acknowledgments .....	xiii
Introduction.....	xv
About the Authors.....	xvii
<b>CHAPTER 1 Next-Generation IT Trends.....</b>	<b>1</b>
Layers of function: the service-oriented infrastructure framework.....	3
Blocks of function: the cloud modules.....	4
Server module.....	5
Storage module.....	5
Fabric module.....	6
WAN module.....	6
End-user type I—branch office.....	7
End-user type II—mobile.....	8
Cloud computing characteristics.....	8
Cloud computing taxonomy.....	9
Deployment models.....	9
Service models.....	10
Tying it all together.....	10
Summary .....	11
<b>CHAPTER 2 Next-Generation Data Center Architectures and Technologies .....</b>	<b>13</b>
The data center consolidation and virtualization modus operandi.....	15
Server consolidation drivers.....	16
The Classic Server Sprawl Syndrome .....	16
Application silos and stovepiped data .....	16
Server virtualization .....	17
Virtual machines and hypervisor .....	18
VMware Networking Primer.....	19
The Cisco Nexus 1000V Switch.....	22
ESX Server storage networking overview .....	31
Storage virtualization .....	35
Block aggregation.....	36
Symmetric and asymmetric storage virtualization.....	37
Layer 2 evolution .....	40
Virtual port channels: the STP makeover .....	42
vPC design brief.....	45
vPC and Nexus 1000V .....	48

Unified data center fabric .....	51
10-gigabit Ethernet .....	52
Ethernet reloaded .....	52
The FCoE solution .....	57
FCoE data plane .....	58
FCoE control plane .....	62
I/O Consolidation with FCoE .....	65
Summary .....	70
<b>CHAPTER 3 Next-Generation WAN and Service Integration.....</b>	<b>73</b>
Service integration in the data center .....	73
Firewall virtualization .....	75
Server load balancing and virtualization .....	76
Infrastructure segmentation .....	80
Layer 2 and layer 3 segmentations .....	80
The next-generation enterprise WAN .....	85
MPLS VPN prelude .....	85
Multi-VPN service from a service provider .....	87
MPLS over L2 circuits .....	88
DMVPN overview .....	90
DMVPN per VRF .....	93
MPLS VPN over DMVPN (hub and spoke only) .....	94
Summary .....	97
<b>CHAPTER 4 Branch Consolidation and WAN Optimization.....</b>	<b>99</b>
What is the WAN performance challenge? .....	100
First challenge: limited bandwidth .....	100
Second challenge: high latency in WAN connections .....	100
Solution: WAN optimization .....	103
WAN optimization benefits .....	104
Bandwidth savings through compression and deduplication .....	104
Speeding up the application layer .....	106
TCP acceleration .....	112
Requirements for WAN optimization deployment .....	114
Getting hold of traffic .....	115
Identifying an optimization partner .....	117
What does optimized traffic look like? .....	117
Implications of optimized traffic on monitoring and prioritization .....	122
Remote office virtualization designs .....	122
Summary .....	125

<b>CHAPTER 5 Session Interception Design and Deployment .....</b>	<b>127</b>
Selecting an interception mechanism .....	127
Placement decision .....	128
Operational impact .....	128
Manageability .....	128
The WCCP deep dive .....	128
WCCP definitions .....	129
WCCP control plane messages .....	130
WCCP service groups .....	133
WCCP interception operation .....	135
WCCP redirection schemes .....	136
WCCP assignment methods .....	137
WCCP return schemes .....	140
WAN optimizer egress methods .....	140
WCCP server platform considerations .....	142
WCCP design examples .....	145
WCCP configuration example .....	153
In-path deployment in brief .....	160
PBR deployment overview .....	161
PBR failover .....	163
Summary .....	165
<b>CHAPTER 6 WAN Optimization in the Private Cloud .....</b>	<b>167</b>
WAN optimization requirements in the cloud .....	168
Interception at the VM level .....	168
Cloud interception with VRF-aware WCCP .....	169
Cloud interception with non-VRF-aware WCCP .....	176
VRF Select .....	176
The WCCPv2 two-way connectivity challenge .....	177
The Not-So-VRF solution .....	179
The Not-So-VRF illustration .....	180
Interception at the services aggregation layer .....	189
Services chassis requirements .....	190
Admin context .....	190
User context .....	197
ACESM interception: bridged mode .....	199
ACESM interception: routed mode .....	209
Health monitoring with probes .....	211
WAN optimizer farm redundancy .....	213
Summary .....	216

<b>CHAPTER 7</b>	<b>SAN Extensions and IP Storage .....</b>	<b>219</b>
	SAN extension overview.....	220
	Data recovery metrics .....	222
	Preliminary design considerations .....	222
	Optical networking solutions .....	229
	Dark fiber.....	229
	DWDM .....	230
	CWDM.....	234
	SONET/SDH services .....	236
	SONET/SDH topologies.....	237
	FCIP .....	238
	FCIP primer .....	239
	FCIP topologies .....	242
	FCIP HA .....	243
	FCIP performance tuning .....	245
	FCIP security .....	254
	iSCSI.....	254
	iSCSI protocol overview .....	255
	iSCSI deployments .....	261
	iSCSI HA .....	263
	iSCSI security .....	263
	Putting it all together .....	265
	Summary .....	266
<b>CHAPTER 8</b>	<b>Cloud Infrastructure as a Service .....</b>	<b>267</b>
	Cloud security .....	267
	Virtual switch security .....	270
	Endpoint security .....	277
	Virtual DMZ .....	277
	Unified computing system .....	278
	UCS Enabling Technologies .....	279
	UCS components .....	281
	Cloud management .....	285
	Hierarchical management .....	285
	Policy-based management .....	286
	Management mediation .....	287
	Automation .....	288
	User self-service .....	288
	XML-ization .....	289
	Cloud IaaS: the big picture .....	289
	Application software submodule .....	291

Virtual machine submodule .....	291
Virtual access-layer submodule .....	292
Compute submodule .....	292
Storage array submodule .....	293
SAN submodule .....	293
SAN extension submodule .....	293
Access-layer submodule .....	293
Aggregation-layer submodule .....	294
Core-layer submodule .....	294
Peering submodule .....	294
Next-generation WAN submodule .....	295
Cloud infrastructure management platform .....	295
End-user workloads and applications .....	296
The cloud IaaS overlay .....	296
Summary .....	297
<b>CHAPTER 9 Case Studies .....</b>	<b>299</b>
Virtual access-layer design study .....	299
Nexus 1000V components .....	300
Design examples .....	301
ERSPAN design study .....	307
ERSPAN source interfaces .....	307
ERSPAN design example .....	307
ERSPAN basic configurations .....	309
Deployment guidelines and restrictions .....	309
WAN optimization study .....	310
Unified fabric design study .....	311
FCoE access-layer design .....	311
Top-of-rack architecture design study .....	319
ToR design with Nexus 5000 and 2000 .....	320
ToR design example: 1GE-attached servers .....	321
FEX basic configurations .....	324
Basic vPC design study .....	329
Basic vPC configurations .....	330
SAN extension design study .....	339
Simple FCIP design example .....	339
Service-oriented infrastructure design study .....	353
Virtual access-layer high-level design .....	354
Compute subnode high-level design .....	355
Storage module high-level design .....	358
Fabric module high-level design .....	359

Services aggregation layer high-level design.....	363
WAN module high-level design .....	366
Design comments .....	368
Summary .....	369
<b>Appendix A Acronyms and Abbreviations.....</b>	<b>371</b>
<b>References .....</b>	<b>381</b>
<b>Index.....</b>	<b>389</b>
