

|                                                  |       |
|--------------------------------------------------|-------|
| <b>Preface</b> .....                             | 1     |
| What should I expect? .....                      | 2     |
| Why Lua and Solar2D? .....                       | 3     |
| Lua and Solar2D: What's the diff? .....          | 3     |
| The thing about games .....                      | 4     |
| The book's theme .....                           | 4     |
| Can only "ace" coders create a mobile app? ..... | 4     |
| References .....                                 | 5     |
| <br><b>Chapter 1: Download &amp; Setup</b> ..... | <br>7 |
| Let the downloads commence .....                 | 7     |
| Downloads: What, Why, and How .....              | 8     |

|                                                 |        |
|-------------------------------------------------|--------|
| Setup .....                                     | 9      |
| Solar2D .....                                   | 9      |
| ZeroBrane Studio (ZBS).....                     | 11     |
| Drawn2Code .....                                | 15     |
| Hello World .....                               | 17     |
| ZeroBrane Studio (ZBS) .....                    | 17     |
| Drawn2Code .....                                | 18     |
| Summary .....                                   | 21     |
| End-of-chapter exercises .....                  | 22     |
| <br><b>Chapter 2: Introduction</b> .....        | <br>25 |
| What is “programming”? .....                    | 25     |
| Programs .....                                  | 27     |
| Input .....                                     | 28     |
| Variable naming rules .....                     | 28     |
| Process .....                                   | 30     |
| Math .....                                      | 31     |
| Strings (text) .....                            | 32     |
| Boolean logic .....                             | 32     |
| Branching & looping .....                       | 34     |
| Functions .....                                 | 36     |
| Output .....                                    | 37     |
| Solar2D.....                                    | 38     |
| The development process .....                   | 38     |
| Code that isn’t input, process, or output ..... | 39     |
| Key programming skills .....                    | 40     |
| Summary .....                                   | 41     |
| End-of-chapter exercises .....                  | 41     |

|                                                  |    |
|--------------------------------------------------|----|
| <b>Chapter 3: The Screen &amp; Intro to Text</b> | 45 |
| Devices and their many shapes and sizes          | 45 |
| Table of Selected Device Screen Resolutions      | 46 |
| Comparative Screen Resolutions                   | 47 |
| The Solar2D Simulator                            | 48 |
| Hello World 2                                    | 48 |
| Using the simulator                              | 50 |
| Defining the content area using “config.lua”     | 51 |
| The content area                                 | 52 |
| Your device                                      | 54 |
| Fonts                                            | 56 |
| Solar2D font limitations                         | 57 |
| Screen size & location                           | 58 |
| But where is (x,y)?                              | 59 |
| Aligning text (and other display objects)        | 60 |
| Setting anchors                                  | 60 |
| Text anchoring playground                        | 61 |
| Colors                                           | 63 |
| Device status bar                                | 65 |
| The flow of execution: Top to bottom             | 65 |
| Order is everything                              | 66 |
| Location is everything too                       | 66 |
| The period and the colon                         | 67 |
| Summary                                          | 67 |
| Chapter resources                                | 68 |
| End-of-chapter exercises                         | 69 |

|                                                     |    |
|-----------------------------------------------------|----|
| <b>Chapter 4: Display Objects &amp; Touch</b> ..... | 71 |
| Beyond text: Shapes & images.....                   | 71 |
| Locating your shape .....                           | 72 |
| Defaults .....                                      | 72 |
| Example: Basic shapes.....                          | 72 |
| Line .....                                          | 73 |
| Rectangle .....                                     | 74 |
| Rounded rectangle .....                             | 74 |
| Circle (that can be stretched into an oval) .....   | 74 |
| Polygon .....                                       | 75 |
| Image .....                                         | 75 |
| Scaled image files .....                            | 76 |
| Changing the colors .....                           | 77 |
| Gradients .....                                     | 78 |
| A little wild .....                                 | 79 |
| A function to simplify your code .....              | 80 |
| Adding text (the MOB DEV logo) .....                | 82 |
| Groups and fun things to do with them .....         | 83 |
| Notes .....                                         | 84 |
| Using the group .....                               | 84 |
| Your first transition .....                         | 85 |
| Touch & sound .....                                 | 86 |
| Notes .....                                         | 87 |
| Flow of execution: Top to bottom & functions .....  | 88 |
| Summary .....                                       | 88 |
| Chapter resources .....                             | 89 |
| End-of-chapter exercises .....                      | 89 |

|                                                     |     |
|-----------------------------------------------------|-----|
| <b>Chapter 5: Buttons &amp; Logic</b> .....         | 91  |
| Your first widget .....                             | 91  |
| Events .....                                        | 91  |
| The event cycle .....                               | 92  |
| Get the widget library .....                        | 93  |
| Buttons .....                                       | 93  |
| Syntax notes .....                                  | 96  |
| Making the button do something .....                | 96  |
| Shape buttons: When words alone aren't enough ..... | 97  |
| Notes .....                                         | 98  |
| A button using images (finally) .....               | 98  |
| The images .....                                    | 99  |
| The syntax .....                                    | 99  |
| The transition effect .....                         | 101 |
| Using logic to control the flow .....               | 104 |
| Flowcharts .....                                    | 104 |
| Touch event phases .....                            | 104 |
| An example: "button_sound" .....                    | 105 |
| Limiting an action to a specific event phase .....  | 106 |
| A second example: "button_sounds" .....             | 106 |
| A third example: "multiple_buttons" .....           | 107 |
| Syntax note: using "dot dot dot" .....              | 109 |
| Advanced: A function to make buttons for you .....  | 110 |
| A simple counter .....                              | 113 |
| Button event-handler (code box #8).....             | 116 |
| Flowcharting the increment/decrement logic .....    | 117 |
| That's an app! .....                                | 118 |
| Summary .....                                       | 118 |

|                                                          |            |
|----------------------------------------------------------|------------|
| Chapter resources.....                                   | 119        |
| End-of-chapter exercises .....                           | 119        |
| <b>Chapter 6: Text Fields &amp; Loops .....</b>          | <b>123</b> |
| Your second widget .....                                 | 123        |
| The native library .....                                 | 123        |
| Text fields .....                                        | 124        |
| Basic setup .....                                        | 124        |
| Text fields produce multiple event-phases .....          | 126        |
| Simulator and platform issues .....                      | 127        |
| The logic of loops .....                                 | 129        |
| The 'for' loop (a known number of repetitions) .....     | 130        |
| Situation #1 .....                                       | 131        |
| The 'while' loop (repeat zero or more times) .....       | 132        |
| A 'while' loop that uses a counting index .....          | 133        |
| Situation #2 .....                                       | 133        |
| The 'repeat until' loop (repeat one or more times) ..... | 136        |
| Simple counting with a 'repeat until' loop .....         | 137        |
| Situation #3 .....                                       | 138        |
| Breaking out of a loop .....                             | 139        |
| A game of dice .....                                     | 140        |
| A 'while' loop works .....                               | 140        |
| But a 'repeat until' works better .....                  | 141        |
| An example with buttons and a text field .....           | 142        |
| 1. Setting up the UI .....                               | 145        |
| 2. Button event-handler .....                            | 145        |
| 3. Text field event-handler .....                        | 147        |
| That's Simple Counter 2! .....                           | 148        |

|                                                                       |            |
|-----------------------------------------------------------------------|------------|
| Summary .....                                                         | 148        |
| Chapter resources .....                                               | 149        |
| End-of-chapter exercises .....                                        | 149        |
| Warning .....                                                         | 150        |
| <b>Chapter 7: Sliders &amp; Functions</b> .....                       | <b>153</b> |
| Your third widget .....                                               | 153        |
| Functions .....                                                       | 154        |
| Sliders .....                                                         | 154        |
| Event data .....                                                      | 155        |
| Change the starting value .....                                       | 157        |
| Change the range (minimum and maximum values) .....                   | 157        |
| Displaying and updating the value .....                               | 158        |
| Note .....                                                            | 159        |
| Putting the algebra in a function .....                               | 159        |
| Note the four requirements of the function syntax (code box #6) ..... | 160        |
| A better function .....                                               | 162        |
| A few notes on this function .....                                    | 164        |
| Slider playground .....                                               | 164        |
| An app with a bit of actual utility? Egads! .....                     | 166        |
| Multiple sliders .....                                                | 166        |
| A settings screen .....                                               | 167        |
| Sharing your awesome color .....                                      | 168        |
| Slider misalignment (“shifty sliders”) .....                          | 169        |
| Fixing the shift .....                                                | 169        |
| Summary .....                                                         | 171        |
| Chapter resources .....                                               | 171        |
| End-of-chapter exercises .....                                        | 172        |

|                                                                 |     |
|-----------------------------------------------------------------|-----|
| <b>Chapter 8: Coding &amp; Debugging</b>                        | 175 |
| Bugs                                                            | 175 |
| Bugs can include                                                | 176 |
| Keep these in mind while coding (the “three laws of debugging”) | 176 |
| Proactive strategies                                            | 177 |
| 1. Define                                                       | 178 |
| 2. Modularize                                                   | 178 |
| 3. Incremental build                                            | 178 |
| 4. Test & debug as you go                                       | 179 |
| Reactive strategies                                             | 180 |
| 1. Look for clues                                               | 180 |
| a. Look for warning from the IDE                                | 181 |
| Errors involving “M”                                            | 182 |
| b. Look at the Lua console                                      | 182 |
| c. Observe what appears                                         | 183 |
| d. Get more information                                         | 184 |
| 2. Isolate the error                                            | 185 |
| 3. Reproduce the error                                          | 186 |
| Summary                                                         | 187 |
| Chapter resources                                               | 187 |
| End-of-chapter exercises                                        | 187 |
| <b>Chapter 9: Dragging &amp; Collisions</b>                     | 189 |
| Tapping, images & sounds                                        | 189 |
| Playing “background” music                                      | 190 |
| A note on sound file formats                                    | 191 |
| Listening for and handling a drag                               | 192 |

|                                                             |            |
|-------------------------------------------------------------|------------|
| More sophisticated drag handling .....                      | 194        |
| Basic collisions .....                                      | 195        |
| Requirements .....                                          | 195        |
| Detecting overlap .....                                     | 197        |
| Sound effect .....                                          | 198        |
| The complications .....                                     | 198        |
| Timers .....                                                | 200        |
| Timed galleons .....                                        | 201        |
| Ten galleon timer .....                                     | 201        |
| Galleon jump .....                                          | 202        |
| Extending a display object with additional attributes ..... | 203        |
| Notes .....                                                 | 205        |
| Tables .....                                                | 205        |
| Tables of your own .....                                    | 205        |
| Datasets .....                                              | 207        |
| Table advantages .....                                      | 208        |
| Not just coins .....                                        | 209        |
| Thirty Taps .....                                           | 210        |
| Making loops that contain script objects .....              | 212        |
| Summary .....                                               | 214        |
| Chapter resources .....                                     | 214        |
| End-of-chapter exercises .....                              | 214        |
| <b>Chapter 10: Switches &amp; Segments .....</b>            | <b>217</b> |
| New widgets .....                                           | 217        |
| Platform differences .....                                  | 218        |
| Basic platform detection .....                              | 219        |
| What up, switches? .....                                    | 220        |

|                                            |            |
|--------------------------------------------|------------|
| Checkboxes .....                           | 220        |
| Adding a text label .....                  | 221        |
| Issue: Centered text .....                 | 222        |
| Issue: Tappable text label .....           | 223        |
| A complete example .....                   | 224        |
| Radio buttons .....                        | 225        |
| Defining a radio button group .....        | 226        |
| Radio button event handler .....           | 226        |
| A complete example .....                   | 227        |
| Issues .....                               | 228        |
| On/off slide (toggle) switch .....         | 229        |
| Issues .....                               | 231        |
| A complete example .....                   | 232        |
| Segmented control .....                    | 232        |
| A complete example .....                   | 235        |
| Switch playground .....                    | 238        |
| Enabling and disabling widgets .....       | 238        |
| Alert dialog pop-up .....                  | 239        |
| Summary .....                              | 241        |
| Chapter resources .....                    | 242        |
| End-of-chapter exercises .....             | 242        |
| <b>Chapter 11: Tabs &amp; Tables .....</b> | <b>245</b> |
| Tab bar .....                              | 245        |
| Tab bar versus segmented control .....     | 246        |
| Syntax and requirements .....              | 246        |
| Notes and glitches .....                   | 249        |
| Table view widget .....                    | 251        |

|                                             |         |
|---------------------------------------------|---------|
| Scroll view widget .....                    | 254     |
| Scrollable image: Calendar .....            | 255     |
| Scrollable text: Team information.....      | 255     |
| Scroll view notes .....                     | 257     |
| Spinner widget .....                        | 257     |
| Image sheet .....                           | 258     |
| One more thing .....                        | 260     |
| Summary .....                               | 260     |
| Chapter resources .....                     | 261     |
| End-of-chapter exercises .....              | 262     |
| <br><b>Chapter 12: Physics I</b> .....      | <br>265 |
| It's built in .....                         | 265     |
| A bouncing ball .....                       | 266     |
| Types of physics bodies .....               | 267     |
| Bounciness .....                            | 268     |
| Playing with the bounce .....               | 268     |
| Other attributes .....                      | 269     |
| Using images rather than basic shapes ..... | 270     |
| Having multiple physics bodies .....        | 271     |
| Irregular shapes .....                      | 272     |
| Hybrid draw mode .....                      | 273     |
| The solution.....                           | 274     |
| Finding the points .....                    | 274     |
| Potentially an easier way .....             | 275     |
| Making the ball roll .....                  | 276     |
| Friction and sliding .....                  | 276     |
| Explore the settings .....                  | 277     |

|                                                 |     |
|-------------------------------------------------|-----|
| Fun with loops and timers .....                 | 278 |
| Using timers in place of loops .....            | 279 |
| Game basics: Runtime and enterFrame .....       | 280 |
| The ball drop (stacked_boxes_vs_10_balls) ..... | 281 |
| Additional considerations .....                 | 281 |
| Game basics: Runtime and Touch .....            | 283 |
| Step-by-step .....                              | 283 |
| Using both together .....                       | 285 |
| Everything moves .....                          | 286 |
| Summary .....                                   | 286 |
| Chapter resources .....                         | 287 |
| End-of-chapter exercises .....                  | 287 |
| <b>Chapter 13: Physics II: Collisions</b> ..... | 289 |
| Collisions: Already happening .....             | 289 |
| Adding the listener .....                       | 290 |
| The collision event .....                       | 291 |
| Information about the collision .....           | 291 |
| Adding the listener to the Runtime object ..... | 293 |
| Comparing the two approaches .....              | 294 |
| Where to Add the Listener .....                 | 295 |
| Eye on the ball .....                           | 296 |
| Making your own sound effects .....             | 296 |
| bfxr .....                                      | 297 |
| Adding a tint .....                             | 297 |
| The result .....                                | 298 |
| Damaging the lockboxes .....                    | 299 |
| The lockbox as a display group .....            | 300 |

|                                                             |            |
|-------------------------------------------------------------|------------|
| Tinting and untinting the correct lockbox(es) take II ..... | 301        |
| Calculating damages .....                                   | 302        |
| Adjustable damages .....                                    | 304        |
| Summary .....                                               | 305        |
| Chapter resources .....                                     | 306        |
| End-of-chapter exercises .....                              | 306        |
| <b>Chapter 14: Physics III: Explosions</b> .....            | <b>309</b> |
| An exploding iron box .....                                 | 311        |
| Dropping a bomb .....                                       | 313        |
| An iron box that takes proximity damage .....               | 316        |
| Applying a blast force .....                                | 320        |
| Where to apply the force .....                              | 322        |
| Lines of force .....                                        | 323        |
| Drawn2Code: More of a game .....                            | 323        |
| Keeping your eye on the iron box .....                      | 324        |
| Alternate approaches .....                                  | 325        |
| A pallet of boxes .....                                     | 326        |
| Using the blast radius .....                                | 327        |
| A landscape app .....                                       | 327        |
| Summary .....                                               | 329        |
| Chapter resources .....                                     | 330        |
| End-of-chapter exercises .....                              | 331        |
| <b>Appendix A: Android Build &amp; Test</b> .....           | <b>333</b> |
| Building for Android .....                                  | 334        |
| Upload the APK file .....                                   | 335        |
| Download & set up the Android Studio .....                  | 336        |

|                                                      |     |
|------------------------------------------------------|-----|
| Using the Android Emulator .....                     | 338 |
| Start your Android device and download the app ..... | 338 |
| Real Android devices .....                           | 341 |
| <b>Appendix B: iOS Build &amp; Test</b> .....        | 343 |
| Install Xcode .....                                  | 343 |
| Building for iOS .....                               | 344 |
| Installing on an iOS device .....                    | 346 |
| <b>Appendix C: Corona Project Management</b> .....   | 349 |
| Beyond main.lua .....                                | 349 |
| Constants .....                                      | 350 |
| Functions .....                                      | 350 |
| Basic UML .....                                      | 353 |
| Extending to the display .....                       | 354 |
| A more complex example .....                         | 356 |
| A buggy encore .....                                 | 356 |
| UML .....                                            | 358 |
| Scope & privacy .....                                | 358 |
