About the Author	xxi
Acknowledgements	xxvi
Preface	xxviii
Introduction	xxxi
1 General Requirements and Common Errors	1
1.1 The General Requirements	1
1.2 Sound Isolation and Background Noise Levels	1
1.2.1 <i>From the Inside Out</i>	2
1.2.2 <i>From the Outside In</i>	3
1.2.3 <i>Realistic Goals</i>	4
1.2.4 <i>Isolation versus Artistry</i>	4
1.3 Confidence in the System	5
1.4 The Complete System	6
1.5 Very Common Mistakes	6
1.5.1 <i>The Need for Space</i>	7
1.5.2 <i>Height</i>	9
1.5.3 <i>Floor Loading</i>	9
1.6 Summary	11
2 Sound, Decibels and Hearing	13
2.1 Perception of Sound	13
2.2 Sound Itself	15

2.3 The Decibel: Sound Power, Sound Pressure and Sound Intensity	19
2.3.1 The dBA and dBC Scales	21
2.4 Human Hearing	24
2.4.1 Chacun a Son Oreille	25
2.5 Summary	30
References	31
Bibliography	32
3 Sound Isolation	33
3.1 Vibrational Behaviour	33
3.1.1 Relevance to Isolation	35
3.2 Basic Isolation Concepts	35
3.2.1 Damping and the Mass Law	36
3.2.2 Floating Structures	36
3.2.3 Floating System Choices	39
3.3 Practical Floors	43
3.3.1 Floors on Weak Sub-Floors	49
3.4 Ceiling Isolation	51
3.4.1 A Trip Through the Ceiling	52
3.5 Summing the Results	56
3.5.1 Internal Reflexions	57
3.6 Wall Isolation	57
3.7 Lighter Weight Isolation Systems	59
3.8 Reciprocity and Impact Noises	60
3.9 The Distance Option	63
3.10 Discussion and Analysis	64
3.10.1 Fibrous and Cellular Springs – Thicknesses and Densities	65
3.10.2 The General Situation with Masses and Springs	66
3.10.3 Measured Characteristics of Various Suspension Materials	72
3.10.4 Calculation of Resonance Frequency	74
3.11 Summary	76
Reference	78
Bibliography	78

4	Room Acoustics and Means of Control	79
4.1	Internal Expansion	81
4.2	Modes	89
4.2.1	<i>The Summing of Modes and Reflexions</i>	96
4.3	Flutter Echoes and Transient Phenomena	98
4.4	Reverberation	100
4.4.1	<i>Measuring Reverberation Time</i>	101
4.5	Absorption	103
4.5.1	<i>Speed of Sound in Gases</i>	105
4.5.2	<i>Other Properties of Fibrous Materials</i>	108
4.5.3	<i>Absorption Coefficients</i>	108
4.5.4	<i>Porous Absorption</i>	109
4.5.5	<i>Resonant Absorbers</i>	111
4.5.6	<i>Membrane Absorbers</i>	114
4.6	Q and Damping	115
4.7	Diffusion	116
4.8	Diffraction	118
4.9	Refraction	119
4.10	Review	121
4.11	Summary	121
	References	123
	Bibliography	123
5	Designing Neutral Rooms	125
5.1	Background	125
5.2	Large Neutral Rooms	127
5.3	Practical Realisation of a Neutral Room	128
5.3.1	<i>Floors</i>	128
5.3.2	<i>Shapes, Sizes and Modes</i>	129
5.3.3	<i>From Isolation Shell Towards Neutrality</i>	131
5.3.4	<i>Lower Frequency Control</i>	132
5.3.5	<i>Relative Merits of Neutrality and Idiosyncrasy</i>	138
5.4	What is Parallel?	139

5.5	Reflexions, Reverberation and Diffusion Requirements	143
5.6	Floor and Ceiling Considerations	146
5.7	Wall Treatments	148
5.8	Small and Neutral	151
5.8.1	<i>Practical Constructions</i>	153
5.8.2	<i>The Journey of the Sound Waves</i>	155
5.8.3	<i>The Pressure Zone</i>	157
5.8.4	<i>Wall Losses</i>	158
5.8.5	<i>Transfer of Sound Between High and Low Densities</i>	159
5.8.6	<i>Combined Effects of Losses</i>	161
5.8.7	<i>A Micro-Problem</i>	163
5.9	Trims	164
5.10	The Degree of Neutrality – An Overview	164
5.11	Dialogue Recording Rooms	166
5.12	Summary	170
	References	173
	Bibliography	173
6	Rooms with Characteristic Acoustics	175
6.1	Definitions	175
6.2	A Brief History of Idiosyncrasy	175
6.2.1	<i>From a Room to a Classic</i>	176
6.2.2	<i>Limited, or Priceless?</i>	177
6.3	Drawbacks of the Containment Shells	180
6.4	Design Considerations	181
6.4.1	<i>Room Character Differences</i>	182
6.5	Driving and Collecting the Rooms	183
6.6	Evolution of Stone Rooms	186
6.6.1	<i>Construction Options</i>	188
6.7	Live versus Electronic Reverberation	190
6.8	The 20% Rule	192
6.9	Reverberant Rooms and Bright Rooms – Reflexion and Diffusion	192
6.9.1	<i>Bright Rooms</i>	196

6.10	Low Frequency Considerations in Live Rooms	198
6.11	General Comments on Live Rooms	202
6.12	Orchestral Rooms	202
6.12.1	<i>Choice of Venues, and Musicians' Needs</i>	203
6.13	RT Considerations	204
6.14	Fixed Studio Environments	206
6.15	Psychoacoustic Considerations and Spatial Awareness	210
6.16	Dead Rooms	213
6.17	Foley Rooms	213
6.18	Summary	217
	References	218
	Bibliography	219
7	Variable Acoustics	221
7.1	The Geometry of Change	221
7.2	Small Room Considerations	230
7.3	Summary	234
8	Room Combinations and Operational Considerations	237
8.1	Options and Influences	237
8.1.1	<i>Demands from Control Rooms</i>	240
8.2	Layout of Rooms	242
8.2.1	<i>Priorities and Practice</i>	242
8.3	Isolation Considerations – Doors and Windows	245
8.3.1	<i>Sliding Doors</i>	246
8.3.2	<i>Window Systems</i>	247
8.3.3	<i>Multiple Glazing Considerations</i>	248
8.3.4	<i>High Degrees of Isolation</i>	250
8.3.5	<i>The Optimum Amount of Isolation</i>	251
8.4	The Geddes Approach	253
8.5	Recording Techniques for Limited Acoustics	256
8.5.1	<i>Moving Musicians and Changing Microphones</i>	256
8.6	Compact Studios in Larger Spaces	258
8.7	Review	259

8.8 Typical Isolation Door Construction	261
8.9 Rectangular Room Shells	263
8.10 Summary	264
References	265
9 The Studio Environment	267
9.1 Some Human Needs	267
9.1.1 Daylight	267
9.1.2 Artificial Light	267
9.1.2.1 Low-Consumption Lighting	269
9.1.3 Ease and Comfort	269
9.2 Ventilation and Air-Conditioning	270
9.2.1 Ventilation	270
9.2.2 Air-Conditioning Systems and General Mechanical Noises	274
9.3 Headphone Foldback	278
9.4 Colours and General Decoration	278
9.5 AC Mains Supplies	280
9.5.1 Phase	281
9.5.2 Power Cabling	282
9.5.3 Balanced Power	283
9.5.4 Mains Feeds	283
9.5.5 Earthing	284
9.6 Summary	284
Reference	285
10 Limitations to Design Predictions	287
10.1 Room Responses	287
10.1.1 The Envelope of the Impulse Response and Reverberation Time	291
10.1.2 Schroeder Plots	293
10.1.3 Energy/Time Curves	294
10.1.4 Waterfall Plots	295
10.1.5 Directional Effects	295
10.2 Scale Models	296

10.3	Computer Models	297
10.4	Sound Pulse Modelling	299
10.5	Light Ray Modelling	299
10.6	Ripple Tank Modelling	299
10.7	Measurement of Absorption Coefficients	300
10.7.1	<i>General Limitations to Precision</i>	302
10.8	Review	304
10.9	Summary	304
	References	305
11	Loudspeakers in Rooms	307
11.1	From the Studio to the Control Room	307
11.2	Room Influences	307
11.2.1	<i>Radiation Patterns</i>	308
11.2.2	<i>Loading by Boundaries</i>	312
11.2.3	<i>Dipole Considerations</i>	317
11.2.4	<i>Diffraction Sources</i>	322
11.3	Room Reverberation and the Critical Distance	323
11.4	Sound Power Radiation	327
11.5	Corrective Measures	329
11.5.1	<i>Minimum and Non-Minimum Phase</i>	330
11.5.2	<i>Digital Correction Techniques</i>	334
11.5.3	<i>Related Problems in Loudspeakers</i>	334
11.5.4	<i>Summary of Correct Applications of Equalisation</i>	336
11.5.5	<i>The Modulation Transfer Function and its Implications for Electronic Room Correction</i>	337
11.5.6	<i>Electronic Bass-Traps</i>	341
11.6	Phase and Time	341
11.7	The Black Art	343
11.8	Summary	343
	References	344
	Bibliography	345
	Essential Reading	345

12	Flattening the Room Response	347
12.1	Electronic Correction Concerns	348
12.2	The Standard Room	353
12.2.1	<i>Beyond the Standard Room</i>	355
12.3	The Anechoic Chamber	357
12.4	The Hybrid Room	357
12.5	A BBC Solution	359
12.6	On Listening Rooms in General	360
12.7	Close-Field Monitoring	362
12.8	Summary	365
	References	367
	Bibliography	368
13	Control Rooms	369
13.1	The Advent of Specialised Control Rooms	370
13.1.1	<i>Geometrically Controlled Rooms</i>	370
13.1.2	<i>Directional Dual Acoustics</i>	371
13.1.3	<i>The LEDE</i>	374
13.1.4	<i>The Non-Environment</i>	375
13.1.5	<i>Toyoshima Rooms</i>	376
13.2	Built-in Monitors	377
13.3	Directional Acoustics	382
13.4	Scaling Problems	383
13.5	The Pressure Zone	384
13.6	One System	386
13.7	Aspects of Small Control Room Designs	388
13.7.1	<i>Conflicting Requirements</i>	392
13.7.2	<i>Active Absorbers</i>	392
13.8	A Short Overview	393
13.9	Summary	393
	References	394
	Bibliography	395

14	The Behaviour of Multiple Loudspeakers in Rooms	397
14.1	Mono Sources	397
14.2	Stereo Sources	399
14.3	Steady-State Performance	401
14.4	Transient Considerations	403
14.5	The Pan-Pot Dilemma	406
14.6	Limitations, Exceptions and Multi-Channel Considerations	407
14.7	Surround in Practice	409
14.8	A General View	417
14.9	Summary	417
	References	418
	Bibliography	418
15	Studio Monitoring: The Principal Objectives	419
15.1	The Forces at Work	419
15.2	Where is the Reference?	421
15.3	Different Needs	424
15.4	What is Right?	425
15.5	Close-Field Monitoring	428
15.6	Why the NS10M?	429
15.7	General Needs	430
15.8	Summary	431
	References	431
	Bibliography	432
16	The Non-Environment Control Room	433
16.1	Introduction	433
16.2	Sources of Uncertainty	434
16.3	Removing a Variable	436
16.4	Limitations – Real and Imaginary	440
16.5	Spacial Anomalies	441
16.6	Solutions	443

16.7	Stereo Imaging Constraints	443
16.8	The Concept of Stereo as Currently Used	445
16.9	Conflicts and Definitions	447
16.10	A Parallel Issue	451
16.11	Prior Art and Established Ideas	452
16.12	The Zero Option – the Origins of the Philosophy	454
16.13	Summary	458
	References	461
17	The Live-End, Dead-End Approach	463
17.1	First Impressions	464
17.2	A Window of Objectivity	464
17.3	Working and Listening Environments	467
17.4	Summary	469
	References	469
	Bibliography	470
18	Response Disturbances Due to Mixing Consoles and Studio Furniture	471
18.1	The Sound of Mixing Consoles	471
18.2	Equipment Racks	475
18.3	Computer and Video Monitoring	475
18.4	Sofas	477
18.5	Effects Units and Ventilation	477
18.6	Close-Field Monitors	478
18.7	General Comments	479
18.8	Summary	480
	Bibliography	481
19	Objective Measurement and Subjective Evaluations	483
19.1	Objective Testing	483
19.1.1	Pressure Amplitude Responses	484
19.1.2	Harmonic Distortion	484
19.1.3	Directivity	484
19.1.4	Acoustic Source	485

842	19.1.5 Step-Function Response	486
842	19.1.6 The Power Cepstrum	486
852	19.2 The On-Axis Pressure Amplitude Response	487
852	19.3 Harmonic Distortion	489
856	19.3.1 Intermodulation Distortion	490
860	19.4 Directivity – Off-Axis Frequency Responses	491
862	19.5 Acoustic Source	495
862	19.6 Step-Function Responses	495
120	19.7 Power Cepstra	500
867	19.8 Waterfalls	500
867	19.9 General Discussion of Results	500
867	19.10 The Enigmatic NS10	504
