1	INTRODUCTION	1
1.1.	Econometrics	1
1.2.	Econometric Modeling	1
1.3.	Theoretical and Applied Econometrics	3
1.4.	Plan of the Book	3
2	MATRIX ALGEBRA	5
2.1.	Introduction	5
2.2.	Some Terminology	5
2.3.	Algebraic Manipulation of Matrices	6
2.3.1.	Equality of Matrices	7
2.3.2.	Transposition	7
2.3.3.	Matrix Addition	7
2.3.4.	Matrix Multiplication	8
2.3.5.	Sums of Values	10
2.3.6.	A Useful Idempotent Matrix	11
2.4.	Geometry of Matrices	13
2.4.1.	Vector Spaces	13
2.4.2.	Linear Combinations of Vectors and Basis Vectors	14
2.4.3.	Linear Dependence	16
2.4.4.	Subspaces	16
2.4.5.	Rank of a Matrix	17
2.4.6.	Determinant of a Matrix	19
2.4.7.	A Least Squares Problem	21
2.5.	Solution of a System of Equations	23
2.5.1.	Systems of Linear Equations	23
2.5.2.	Inverse Matrices	24
2.5.3.	Nonhomogeneous Systems of Equations	26
2.6.	Partitioned Matrices	26
2.6.1.	Addition and Multiplication of Partitioned Matrices	26
2.6.2.	Determinants of Partitioned Matrices	27
2.6.3.	Inverses of Partitioned Matrices	27
2.6.4.	Deviations from Means	28
2.6.5.	Kronecker Products	28

2.7.	Characteristic Roots and Vectors	29
2.7.1.	The Characteristic Equation	29
2.7.2.	Characteristic Vectors	30
2.7.3.	General Results for Characteristic Roots and Vectors	31
2.7.4.	Diagonalization of a Matrix	31
2.7.5.	Rank of a Matrix	32
2.7.6.	Condition Number of a Matrix	32
2.7.7.	Trace of a Matrix	33
2.7.8.	Determinant of a Matrix	34
2.7.9.	Spectral Decomposition of a Matrix	34
2.7.10.	Powers of a Matrix	34
2.7.11.	Idempotent Matrices	36
2.7.12.	Factoring a Matrix	36
2.7.13.	The Generalized Inverse of a Matrix	37
2.8.	Quadratic Forms and Definite Matrices	38
2.8.1.	Nonnegative Definite Matrices	38
2.8.2.	Idempotent Quadratic Forms	39
2.8.3.	Ranking Matrices	39
2.9.	Calculus and Matrix Algebra	40
2.9.1.	Differentiation and the Taylor Series	41
2.9.2.	Optimization	44
2.9.3.	Constrained Optimization	46
2.9.4.	Transformations	48
Exercises		49

3 PROBABILITY AND DISTRIBUTION THEORY

53

3.1.	Introduction	53
3.2.	Random Variables	53
3.2.1.	Probability Distributions	53
3.2.2.	Cumulative Distribution Function	54
3.3.	Expectations of a Random Variable	55
3.4.	Some Specific Probability Distributions	57
3.4.1.	The Normal Distribution	58
3.4.2.	The Chi-Squared, t , and F Distributions	58
3.4.3.	Distributions with Large Degrees of Freedom	59
3.4.4.	Size Distributions—The Lognormal Distribution	60
3.4.5.	The Gamma Distribution	61
3.4.6.	The Beta Distribution	61
3.5.	The Distribution of a Function of a Random Variable	61
3.6.	Joint Distributions	63
3.6.1.	Marginal Distributions	64
3.6.2.	Expectations in a Joint Distribution	64
3.6.3.	Covariance and Correlation	65
3.6.4.	Distribution of Functions of Bivariate Random Variables	66
3.7.	Conditioning in a Bivariate Distribution	67
3.7.1.	Regression—The Conditional Mean	67
3.7.2.	Conditional Variance	68

3.7.3.	Relationships Among Marginal and Conditional Moments	69
3.7.4.	The Analysis of Variance	71
3.8.	The Bivariate Normal Distribution	72
3.9.	Multivariate Distributions	73
3.9.1.	Moments	73
3.9.2.	Sets of Linear Functions	74
3.9.3.	Nonlinear Functions	75
3.10.	The Multivariate Normal Distribution	75
3.10.1.	Marginal and Conditional Distributions	76
3.10.2.	Linear Functions of a Normal Vector	77
3.10.3.	Quadratic Forms in a Standard Normal Vector	77
3.10.3a.	Idempotent Quadratic Forms	77
3.10.3b.	Independence of Idempotent Quadratic Forms	79
3.10.4.	The F Distribution	79
3.10.5.	A Full Rank Quadratic Form	79
3.10.6.	Independence of a Linear and a Quadratic Form	80
Exercises		81
Appendix: Integration—The Gamma Function		85

4 STATISTICAL INFERENCE

87

4.1.	Introduction	87
4.2.	Samples and Sampling Distributions	87
4.2.1.	Random Sampling	87
4.2.2.	Descriptive Statistics	88
4.2.3.	Sampling Distributions	90
4.3.	Point Estimation of Parameters	91
4.3.1.	Estimation in a Finite Sample	93
4.3.2.	Efficient Unbiased Estimation	95
4.4.	Large-Sample Distribution Theory	99
4.4.1.	Convergence in Probability	99
4.4.2.	Convergence in Distribution—Limiting Distributions	102
4.4.3.	Asymptotic Distributions	106
4.4.4.	Asymptotic Distribution of a Nonlinear Function	108
4.4.5.	Asymptotic Expectations	109
4.5.	Efficient Estimation—Maximum Likelihood	110
4.5.1.	Properties of Maximum Likelihood Estimators	114
4.5.2.	Estimating the Variance of the Maximum Likelihood Estimator	115
4.6.	Consistent Estimation—The Method of Moments	117
4.6.1.	Random Sampling and Estimating the Parameters of Distributions	117
4.6.2.	Computing the Variance of a Method of Moments Estimator	121
4.7.	Interval Estimation	123
4.8.	Hypothesis Testing	125
4.8.1.	Testing Procedures	126
4.8.2.	Tests Based on Confidence Intervals	128

4.8.3.	Three Asymptotically Equivalent Test Procedures	129
4.8.3a.	The Likelihood Ratio Test	130
4.8.3b.	The Wald Test	131
4.8.3c.	The Lagrange Multiplier Test	133
4.8.4.	An Example of the Test Procedures	134
4.8.4a.	Confidence Interval Test	135
4.8.4b.	Likelihood Ratio Test	135
4.8.4c.	Wald Test	135
4.8.4d.	Lagrange Multiplier Test	136
Exercises		136

5 THE CLASSICAL LINEAR REGRESSION MODEL 140

5.1.	Introduction	140
5.2.	Specifying the Regression Model—An Example	140
5.3.	The Assumptions of the Linear Regression Model	143
5.3.1.	Functional Form and Nonlinear Models	144
5.3.2.	The Regressor	146
5.3.3.	The Disturbance	146
5.4.	Least Squares	148
5.4.1.	The Least Squares Coefficients	148
5.4.2.	Evaluating the Fit of the Regression	150
5.5.	Statistical Properties of the Least Squares Estimator	155
5.6.	Statistical Inference	159
5.6.1.	Estimating the Sampling Distribution	159
5.6.2.	Testing a Hypothesis About β	160
5.6.3.	Tests Based on the Fit of the Regression	162
5.7.	Prediction	164
Exercises		166

6 MULTIPLE REGRESSION 170

6.1.	Introduction	170
6.2.	Assumptions of the Linear Model	170
6.3.	Least Squares Regression	172
6.3.1.	The Least Squares Coefficient Vector	173
6.3.2.	Some Examples	174
6.3.3.	Algebraic Aspects of the Solution	177
6.3.4.	Partitioned Regression and Partial Regression	179
6.3.5.	Partial Regression and Partial Correlation Coefficients	180
6.3.6.	Deviations from Means—Regression on a Constant	181
6.4.	Statistical Properties of the Least Squares Estimator	182
6.4.1.	Nonstochastic Regressors	182
6.4.2.	Stochastic Regressors	183
6.5.	Statistical Inference	184
6.5.1.	Testing a Hypothesis About a Coefficient	184
6.5.2.	Testing a Linear Restriction	187
6.5.3.	Test Statistics with Stochastic X and Normal ϵ	190

6.6.	Goodness of Fit and the Analysis of Variance	191
6.7.	Testing the Significance of the Regression	194
6.8.	Prediction	195
6.8.1.	A Convenient Method of Computing the Forecasts	196
6.8.2.	Measuring the Accuracy of Forecasts	197
Exercises		198

7 HYPOTHESIS TESTS WITH THE MULTIPLE REGRESSION MODEL 203

7.1.	Introduction	203
7.2.	Testing Restrictions	203
7.2.1.	Two Approaches to Testing Hypotheses	203
7.2.2.	Testing a Set of Linear Restrictions	204
7.2.3.	The Restricted Least Squares Estimator	205
7.2.4.	Testing the Restrictions	206
7.2.5.	Examples and Some General Procedures	206
7.3.	Tests of Structural Change	211
7.3.1.	Different Parameter Vectors	211
7.3.2.	Different Constant Terms	212
7.3.3.	Change in a Subset of Coefficients	213
7.3.4.	Insufficient Observations	214
7.4.	Tests of Structural Change with Unequal Variances	215
7.5.	Alternative Tests of Model Stability	216
7.6.	Testing Nonlinear Restrictions	218
7.7.	Choosing Between Nonnested Models	222
Exercises		225

8 FUNCTIONAL FORM, NONLINEARITY, AND SPECIFICATION 229

8.1.	Introduction	229
8.2.	Dummy Variables	229
8.2.1.	Comparing Two Means	229
8.2.2.	Binary Variables in Regression	231
8.2.3.	Several Categories	232
8.2.4.	Several Groupings	233
8.2.5.	Threshold Effects	234
8.2.6.	Interactions and Spline Regression	235
8.3.	Nonlinearity in the Variables	238
8.3.1.	Functional Forms	238
8.3.2.	Identifying Nonlinearity	240
8.3.3.	Intrinsic Linearity and Identification	242
8.4.	Specification Analysis	244
8.4.1.	Selection of Variables	244
8.4.2.	Omission of Relevant Variables	245
8.4.3.	Inclusion of Irrelevant Variables	248

8.5.	Biased Estimators and Pretest Estimators	248
8.5.1.	The Mean-Squared-Error Test	249
8.5.2.	Pretest Estimators	251
8.5.3.	Inequality Restrictions	253
8.6.	Bayesian Estimation	255
8.6.1.	Bayesian Analysis of the Classical Regression Model	255
8.6.2.	Estimation with an Informative Prior Density	258
	Exercises	260
9	DATA PROBLEMS	266
9.1.	Introduction	266
9.2.	Multicollinearity	266
9.2.1.	Perfect Collinearity	267
9.2.2.	Near Multicollinearity	267
9.2.3.	The Symptoms of Multicollinearity	267
9.2.4.	Suggested Remedies for the Multicollinearity Problem	270
9.3.	Missing Observations	273
9.4.	Grouped Data	277
9.5.	Measurement Error and Proxy Variables	279
9.5.1.	One Badly Measured Variable	280
9.5.2.	Multiple Regression with Measurement Error	283
9.5.3.	The Method of Instrumental Variables	284
9.5.4.	Proxy Variables	286
9.5.5.	A Specification Test for Measurement Error	287
9.6.	Regression Diagnostics and Influential Data Points	287
	Exercises	289
10	LARGE-SAMPLE RESULTS FOR THE CLASSICAL REGRESSION MODEL	292
10.1.	Introduction	292
10.2.	The Finite-Sample Properties of Least Squares	292
10.3.	Asymptotic Distribution Theory for the Classical Regression Model	293
10.3.1.	Consistency of the Least Squares Coefficient Vector	293
10.3.2.	Asymptotic Normality of the Least Squares Estimator	295
10.3.3.	Asymptotic Distribution of a Function of $\mathbf{b}$ —The Delta Method	297
10.3.4.	Asymptotic Behavior of the Standard Test Statistics	299
10.3.5.	Consistency of s^2 and the Estimator of $\text{Asy.Var}[\mathbf{b}]$	301
10.4.	Stochastic Regressors and Lagged Dependent Variables	302
10.5.	Normally Distributed Disturbances	305
10.5.1.	Asymptotic Efficiency—Maximum Likelihood Estimation	305
10.5.2.	Cases in Which Least Squares Is Inefficient	307

- 10.5.3. Alternative Estimation Criteria 308
 10.5.4. Detecting Departures from Normality 309

Exercises 311

11 NONLINEAR REGRESSION MODELS 314

- 11.1. Introduction 314
 11.2. Nonlinear Regression Models 314
 11.2.1. The Linearized Regression 315
 11.2.2. Nonlinear Least Squares Estimation 316
 11.2.3. A Specification Test for Nonlinear Regressions: Testing for
 Linear Versus Log-Linear Specification 321
 11.3. Parametric Transformations of the Dependent Variable 324
 11.4. The Box-Cox Transformation 329
 11.4.1. Transforming the Independent Variables 329
 11.4.2. Transforming the Model 331
 11.4.3. A Test for (Log-) Linearity 334
 11.5. Hypothesis Testing and Parametric Restrictions 335
 11.5.1. An Asymptotically Valid F Test 336
 11.5.2. Wald Test 336
 11.5.3. Likelihood Ratio Test 336
 11.5.4. Lagrange Multiplier Test 337
Exercises 341

12 AN INTRODUCTION TO NONLINEAR OPTIMIZATION 343

- 12.1. Introduction 343
 12.2. Optimization Problems 343
 12.3. Grid Search 344
 12.4. General Characteristics of Algorithms 344
 12.5. Gradient Methods 346
 12.5.1. Steepest Ascent 346
 12.5.2. Newton's Method 347
 12.5.3. Maximum Likelihood Estimation 347
 12.5.4. Alternatives to Newton's Method 348
 12.5.5. Quasi-Newton Methods—Davidon—Fletcher—Powell 350
 12.6. Some Practical Considerations 350
 12.7. Examples 352
 12.8. The Concentrated Log Likelihood 355
Exercises 356

13 NONSPHERICAL DISTURBANCES 358

- 13.1. Introduction 358
 13.2. Consequences for Ordinary Least Squares 359
 13.2.1. Finite-Sample Properties 359
 13.2.2. Asymptotic Properties of Least Squares 360

13.3. Efficient Estimation	361
13.3.1. Generalized Least Squares	361
13.3.2. Maximum Likelihood Estimation	364
13.4. Estimation When Ω Is Unknown	365
13.4.1. Feasible Generalized Least Squares	365
13.4.2. Maximum Likelihood Estimation	366
13.5. The Generalized Method of Moments (GMM) Estimator	370
13.5.1. Method of Moments Estimators	370
13.5.2. Generalizing the Method of Moments	372
13.5.3. Testing the Validity of the Moment Restrictions	374
13.5.4. GMM Estimation of Econometric Models	375
13.5.5. Testing Restrictions	379
Exercises	381

14 HETEROSCEDASTICITY 384

14.1. Introduction	384
14.2. Ordinary Least Squares Estimation	386
14.2.1. Inefficiency of Least Squares	387
14.2.2. The Estimated Covariance Matrix of $\mathbf{b}$	388
14.2.3. Estimating the Appropriate Covariance Matrix for Ordinary Least Squares	391
14.3. Testing for Heteroscedasticity	392
14.3.1. White's General Test	392
14.3.2. The Goldfeld–Quandt Test	393
14.3.3. The Breusch–Pagan/Godfrey Test	394
14.3.4. Testing for Groupwise Heteroscedasticity	395
14.3.5. Tests Based on Regressions—Glesjer's Tests	396
14.4. Generalized Least Squares When Ω Is Known	397
14.5. Estimation When Ω Contains Unknown Parameters	399
14.5.1. Two-Step Estimation	399
14.5.2. Maximum Likelihood Estimation	402
14.6. General Conclusions	407
Exercises	408

15 AUTOCORRELATED DISTURBANCES 411

15.1. Introduction	411
15.2. The Analysis of Time-Series Data	413
15.3. Disturbance Processes	415
15.3.1. Characteristics of Disturbance Processes	415
15.3.2. AR(1) Disturbances	416
15.4. Least Squares Estimation	418
15.4.1. OLS Estimation with Lagged Dependent Variables	419
15.4.2. Efficiency of Least Squares	420
15.4.3. Estimating the Variance of the Least Squares Estimator	422
15.5. Testing for Autocorrelation	423
15.5.1. The Durbin–Watson Test	423

15.5.2.	Other Testing Procedures	426
15.5.3.	Testing in the Presence of Lagged Dependent Variables	428
15.6.	Efficient Estimation When Ω Is Known	428
15.6.1.	Generalized Least Squares	428
15.6.2.	Maximum Likelihood Estimation	430
15.7.	Estimation When Ω Is Unknown	431
15.7.1.	AR(1) Disturbances	431
15.7.2.	AR(2) Disturbances	435
15.7.3.	Estimation with a Lagged Dependent Variable	435
15.8.	Forecasting in the Presence of Autocorrelation	437
15.9.	Autoregressive Conditional Heteroscedasticity	438
	Exercises	442

16 MODELS THAT USE BOTH CROSS-SECTION AND TIME-SERIES DATA 444

16.1.	Introduction	444
16.2.	Time-Series-Cross-Section Data	444
16.3.	Models of Several Time Series	447
16.3.1.	Cross-Sectional Heteroscedasticity	448
16.3.2.	Cross-Sectional Correlation	452
16.3.3.	Autocorrelation	455
16.3.4.	A Random Coefficients Model	459
16.3.5.	Summary	463
16.4.	Longitudinal Data	464
16.4.1.	A Basic Model of Heterogeneity	465
16.4.2.	Fixed Effects	466
16.4.3.	Random Effects	469
16.4.3a.	Generalized Least Squares	470
16.4.3b.	Feasible Generalized Least Squares When Ω Is Unknown	474
16.4.4.	Fixed or Random Effects?	479
	Exercises	480

17 SYSTEMS OF REGRESSION EQUATIONS 486

17.1.	Introduction	486
17.2.	The Seemingly Unrelated Regressions Model	487
17.2.1.	Generalized Least Squares	488
17.2.2.	Feasible Generalized Least Squares	489
17.2.3.	Maximum Likelihood Estimation	493
17.2.3a.	Iterated FGLS	493
17.2.3b.	Direct Maximum Likelihood Estimation	493
17.2.4.	Autocorrelation	497
17.3.	Systems of Demand Equations—Singular Systems	499
17.4.	Flexible Functional Forms—Translog Cost Function	503
	Exercises	508

18 REGRESSIONS WITH LAGGED VARIABLES

511

- 18.1. Introduction 511
- 18.2. Distributed Lag Models 511
 - 18.2.1. Lagged Effects in a Regression Model 512
 - 18.2.2. The Lag and Difference Operators 514
- 18.3. Unrestricted Finite Distributed Lag Models 515
- 18.4. Polynomial Distributed Lag Models 519
 - 18.4.1. Estimation by Restricted Least Squares 523
 - 18.4.2. Determining the Degree of the Polynomial 523
 - 18.4.3. Determining the Lag Length 524
- 18.5. The Geometric Lag Model 525
 - 18.5.1. Economic Models with Geometric Lags 526
 - 18.5.2. Stochastic Specifications in the Geometric Lag Models 528
 - 18.5.3. Estimating the Moving Average Form of the Geometric Lag Model 529
 - 18.5.3a. Uncorrelated Disturbances 529
 - 18.5.3b. Autocorrelated Disturbances 531
 - 18.5.3c. Estimating the MA Form of the Partial Adjustment Model 534
 - 18.5.4. Estimating the Autoregressive Form of the Geometric Lag Model 534
 - 18.5.4a. Uncorrelated Disturbances 534
 - 18.5.4b. Autocorrelated Disturbances—Instrumental Variables 535
 - 18.5.4c. Autoregressive Disturbances—Hatanaka's Estimator and the Maximum Likelihood Estimator 535
 - 18.5.4d. MA Disturbances—The Adaptive Expectations Model 536
 - 18.5.5. Disturbance Specifications in the Geometric Lag Model 537
- 18.6. Dynamic Regression Models 538
 - 18.6.1. Nonlinear Least Squares Estimation of ARIMA and ARMAX Models 539
 - 18.6.2. Computation of the Lag Weights in the ARMAX Model 542
 - 18.6.3. Stability of a Dynamic Equation 543
 - 18.6.4. Forecasting 544
- Appendix: Nonlinear Least Squares Estimation 545
- Exercises 547

19 TIME-SERIES MODELS

549

- 19.1. Introduction 549
- 19.2. Stationary Stochastic Processes 549
 - 19.2.1. Autoregressive—Moving Average Processes 550
 - 19.2.2. Vector Autoregressions 552

19.2.3.	Stationarity and Invertibility	554
19.2.4.	Autocorrelations of a Stationary Process	557
19.3.	Integrated Processes and Differencing	559
19.4.	Random Walks, Trends, and Spurious Regressions	560
19.5.	Unit Roots in Economic Data	563
19.6.	Cointegration and Error Correction	566
19.7.	Generalized Autoregressive Conditional Heteroscedasticity	568
19.7.1.	Maximum Likelihood Estimation of the GARCH Model	570
19.7.2.	Pseudo-Maximum Likelihood Estimation	574
19.7.3.	Testing for GARCH Effects	575
19.7.4.	An Example	576
Exercises		577

20 SIMULTANEOUS EQUATIONS MODELS **578**

20.1.	Introduction	578
20.2.	Fundamental Issues in Simultaneous Equations Models	578
20.2.1.	Illustrative Systems of Equations	579
20.2.2.	A General Notation for Simultaneous Equations Models	582

21.5.1.	Fixed and Random Effects Models for Panel Data	655
21.5.2.	Semiparametric Estimation	657
21.5.3.	Nonparametric Estimation—The Maximum Score Estimator	658
21.6.	Bivariate and Multivariate Probit Models	660
21.6.1.	Maximum Likelihood Estimation	660
21.6.2.	Extensions	663
21.6.2a.	A Multivariate Probit Model	663
21.6.2b.	A Model with Censoring	664
21.7.	Models for Multiple Choices	664
21.7.1.	Unordered Multiple Choices	664
21.7.1a.	The Multinomial Logit Model	666
21.7.1b.	The Conditional Logit Model	668
21.7.1c.	The Independence of Irrelevant Alternatives	670
21.7.2.	Ordered Data	672
21.8.	A Poisson Model for Count Data	676
	Exercises	679
22	LIMITED DEPENDENT VARIABLE AND DURATION MODELS	682
22.1.	Introduction	682
22.2.	Truncation	682
22.2.1.	Truncated Distributions	683
22.2.2.	Moments of Truncated Distributions	684
22.2.3.	The Truncated Regression Model	687
22.2.3a.	Least Squares Estimation	689
22.2.3b.	Maximum Likelihood Estimation	689
22.3.	Censored Data	691
22.3.1.	The Censored Normal Distribution	691
22.3.2.	The Censored Regression Model—Tobit Analysis	694
22.3.3.	Estimation	696

22.3.4.	Some Issues in Specification	698
22.3.4a.	Heteroscedasticity	698
22.3.4b.	Misspecification of $\text{Prob}[y^* < 0]$	700
22.3.4c.	Nonnormality	701
22.3.4d.	Conditional Moment Tests—An Introduction	701
22.4.	Selection—Incidental Truncation	706
22.4.1.	Incidental Truncation in a Bivariate Distribution	707
22.4.2.	Regression in a Model of Selection	708
22.4.3.	Estimation	711
22.4.4.	Treatment Effects	713
22.4.5.	The Normality Assumption	714
22.5.	Models for Duration Data	715
22.5.1.	Duration Data	715
22.5.2.	A Regression-Like Approach—Parametric Models of Duration	716
22.5.2a.	Theoretical Background	716
22.5.2b.	Models of the Hazard Rate	717
22.5.2c.	Maximum Likelihood Estimation	719
22.5.2d.	Exogenous Variables	721
22.5.2e.	Specification Analysis	722
22.5.2f.	Heterogeneity	724
22.5.3.	Other Approaches	725
Exercises	726	
Appendix Tables	728	
1.	Cumulative Normal Distribution	729
2.	Ordinates of the Standard Normal Density	730
3.	Percentiles of the Student's t Distribution	731
4.	Percentiles of the Chi-Squared Distribution	732
5.	95th Percentiles of the F Distribution	734
6.	99th Percentiles of the F Distribution	736
7.	Durbin-Watson Test	738
8.	Five Percent Significance Point of $d_{4,L}$ and $d_{4,U}$ for Regressions Without Quarterly Dummy Variables ($k = k' + 1$)	744
